

# Intro

Hello and thank you for bought my asset, i will describe all aspect of asset below, but if you have any questions, please contract me via email [liyabohnat@gmail.com](mailto:liyabohnat@gmail.com)

## Asset Describe

This asset contain modular part of Industrial CatWalk's that can fit to any scene with Warehouse/Factory/Facilities environment type.

This pack is split in two part: **FREE** and **PAID** version. Both have the same hierarchy structure. the **PAID** version provide you more colors and modules like Ladder,Ramp and variants of platforms without rails or with cage above.

**Folder [Prefabs]** - Contain modules , which you can use to assemble your own Catwalks.

**Folder [Textures\_Materials]** - Contain textures that can be used on any render pipeline and ready to use materials for URP and HDRP render pipeline. You can copy-paste materials settings between each other for faster conversion.

## Asset Optimisation Guide

- Each Asset have 4 levels of LOD. LoD0,LoD1,LoD2,LoD3 . LOD0 is meaned for PC only. If you are using it for VR/Mobile game, you can strip out LOD0 version and begin rendering from LOD1 version.
- While asset use 4096x4096 pixels textures, i do recommend to downscale texture resolution to 2048x2048 for VR and Mobile and 1024x1024 pixels for very weak platforms.
- Paid version of asset have multiple colors variations. You can delete unused one to reduce memory usage of asset.

**if you liked my free version of asset, and want to support my hard work, you can [upgrade this package to Paid version of Catwalks](#) and also [explore other my assets](#) with hing-quality details and great performance optimization. And i'm would be happy if you can leave your review on Store please =)**

Best wishes,  
Liya
